

DAYANANDA SAGAR COLLEGE OF ENGINEERING

Shavige Malleshwara Hills, Kumaraswamy Layout, Bangalore-560078

Department of Artificial Intelligence and Machine Learning

INTERNSHIP REPORT

ON

“Associate Product Management Internship of financial accounting tool finlens”

Submitted in partial fulfillment for the award of degree(20AI8ICINT)

BACHELOR OF ENGINEERING IN

Department of Artificial Intelligence and Machine Learning

Submitted by:

Kaashif Meraj - 1DS21AI026

Conducted at

Authlayer pvt ltd

Department of Artificial Intelligence and Machine Learning

Dayananda Sagar College of Engineering Bangalore-78

DAYANANDA SAGAR COLLEGE OF ENGINEERING

Shavige Malleshwara Hills, Kumaraswamy Layout, Bangalore-560078

Department of Artificial Intelligence and Machine Learning

CERTIFICATE

This is to certify that the Internship titled “Applications of python in modern software solutions” carried out by **Mr Kaashif Meraj [1DS21AI026]**, a bonafide student of Dayananda Sagar College of Engineering, in partial fulfillment for the award of **Bachelor of Engineering**, in **Artificial Intelligence and Machine Learning** during the year 2024-2025. It is certified that all corrections/suggestions indicated have been incorporated in the report.

The internship report has been approved as it satisfies the academic requirements in respect course Internship (20AI8ICINT)

DECLARATION

I, **Kaashif Meraj** , final year student of Artificial Intelligence and Machine Learning, Dayananda Sagar College of Engineering, Bangalore - 560078, declare that the Internship has been successfully completed, in **Authlayer pvt ltd.** This report is submitted in partial fulfillment of the requirements for the award of Bachelor's degree in Artificial Intelligence and Machine Learning, during the academic year 2024- 2025.

Date:

USN: 1DS21AI026

Place: Bangalore

NAME: Kaashif Meraj

OFFER LETTER

AUTHLAYER
<https://www.authlayer.com>

United States:

2261 Market St, #4064
San Francisco, CA
94114

India:

#001, Floor Gr, Sipani Classe
1, Koramangala 8th Block,
Bangalore
Karnataka 560029

Hi Kaashif,

We are pleased to offer you the position of Associate Product Management Internship with a start date of Jan 6th 2025 for 16 weeks.

In this role, you will be required to research and work on the suite of products that we currently develop, specifically - Finlens – a SaaS accounting app for early stage founders.

You'll assist the engineering team to identify and fix bugs within the existing libraries that we have shipped and suggest enhancement.

This is an in-person role based out of our Bangalore office.

You'll also be responsible for writing feature specifications that you'll work with the engineering team to implement within the product offered by Authlayer.

The monthly starting salary for this position is INR 30,000 to be paid on a monthly basis by direct deposit to your account, starting on 1st of Feb 2025.

Salary: INR 30,000 / monthly

You can see our company's profile on:

1. <https://angel.co/company/zefti-1/funding>
2. <https://www.ycombinator.com/companies/finlens>

We are excited to have you join our team!

Regards,
Md Halim
Founder & CEO
Authlayer Inc.

ACKNOWLEDGEMENT

This Internship is a result of accumulated guidance, direction and support of several important persons. We take this opportunity to express our gratitude to all who have helped us to complete the Internship.

We express our sincere thanks to our Principal **Dr. B G Prasad**, for providing us adequate facilities to undertake this Internship.

We would like to thank **Dr. Vindhya P Malagi**, Head of Department – AI & ML, for providing us an opportunity to carry out Internship and for her valuable guidance and support.

We would like to thank **Mr. M D Halim**, Founder & CEO, Authlayer pvt ltd, for guiding me during the period of internship.

We express our deep and profound gratitude to our Internship Co-ordinator, **Prof. Kavya D N**, Assistant Professor – AI & ML, for her keen interest and encouragement at every step in completing the Internship.

We would like to thank all the faculty members of AI & ML department for the support extended during the course of Internship.

We would like to thank the non-teaching members of the Department of AI & ML, for helping us during the Internship.

Last but not the least, we would like to thank our parents and friends without whose constant help, the completion of Internship would have not been possible.

Kaashif Meraj [1DS21AI026]

CHAPTER 1

INTRODUCTION

INTRODUCTION

The internship at **AuthLayer** provided a dynamic opportunity to immerse myself in the world of SaaS-based accounting platforms and gain hands-on experience in product research, UI/UX optimization, and client strategy. In the evolving landscape of financial technology, AuthLayer stands out by offering secure, developer-centric APIs and scalable software solutions for businesses managing their accounting and financial operations.

Throughout my internship, I was entrusted with key responsibilities that bridged both the technical and business aspects of product development. This included:

1. **Product Research & Competitive Analysis:** Conducted in-depth benchmarking of industry-leading SaaS platforms to identify feature gaps and recommend enhancements that aligned with user demands and market trends.
2. **UI/UX Design & Feedback Integration:** Collaborated with designers using tools like Figma to improve navigation flow, simplify dashboard interfaces, and incorporate real-time client feedback into functional product improvements.
3. **Pricing and Onboarding Strategy:** Assisted in developing tier-based pricing structures, as well as revamping the user onboarding process, resulting in reduced churn and improved first-time user experience.
4. **Client Interaction and Documentation:** Participated in client onboarding sessions, provided product walkthroughs, and prepared technical documentation that streamlined internal handoffs and user training.

This internship significantly sharpened my product thinking and business acumen, giving me insight into how real-world SaaS tools are designed, tested, and deployed. The experience of working in a fast-paced, startup environment also helped refine my communication, cross-functional collaboration, and problem-solving skills, making this opportunity a crucial milestone in my journey toward a career in product management and technology strategy.

DESCRIPTION OF ORGANIZATION

AuthLayer Labs Private Limited

Introduction

AuthLayer is a Bengaluru-based fintech company specializing in building secure, developer-friendly financial infrastructure. Founded in 2019, the company offers open banking APIs and cloud-native platforms that empower businesses to automate financial operations, enhance compliance, and deliver intelligent financial services. Backed by Y Combinator, Accel, Goodwater Capital, and other prominent investors, AuthLayer is at the forefront of redefining how modern finance is built and scaled.

Vision

To revolutionize the financial technology landscape by providing secure, scalable, and intelligent solutions that empower businesses to innovate and thrive in the digital economy.

Mission

To develop cutting-edge financial infrastructure and tools that enable seamless integration, automation, and intelligence in financial services, fostering growth and efficiency for businesses worldwide.

Core Areas of Work:

- **Open Banking APIs:** Providing secure and scalable APIs for banking services, enabling developers to integrate financial functionalities into their applications seamlessly.
- **Cloud-Native Platforms:** Developing platforms like ZeFi and Finlens that offer cloud-based solutions for financial operations, including accounting automation and financial analytics.
- **Financial Automation:** Creating tools that automate financial processes, reducing manual intervention and increasing operational efficiency.
- **Data Security and Compliance:** Ensuring robust security protocols and compliance measures are in place to protect sensitive financial data and adhere to regulatory standards.
- **AI-Driven Financial Insights:** Leveraging artificial intelligence to provide predictive analytics and insights, aiding businesses in making informed financial decisions.
- **Developer Tools and SDKs:** Offering comprehensive toolkits and documentation to assist developers in building and deploying financial applications effectively.

ABOUT THE COMPANY

About AuthLayer

AuthLayer Labs Pvt. Ltd. is a fast-evolving fintech technology company dedicated to building intelligent financial infrastructure and secure digital tools for the modern business world. Founded with a mission to simplify financial processes through automation and innovation, AuthLayer has established itself as a rising force in the SaaS and financial API ecosystem.

The company offers a robust suite of services that includes banking API integrations, compliance automation, AI-powered financial insights, and cloud-based accounting platforms. Known for its developer-centric approach, AuthLayer builds tools that empower companies to seamlessly integrate secure financial operations into their systems. Python, alongside other modern technologies, serves as a foundation for backend development, automation workflows, and data handling due to its scalability and efficiency.

AuthLayer serves a diverse range of clients and industries, including:

- **Financial Services** – Enabling secure APIs for payments, KYC, bank verification, and automated reconciliations.
- **Startups & SMEs** – Providing modular platforms for accounting, cash flow analysis, and performance dashboards.
- **E-commerce & Retail** – Offering seamless invoicing tools and customer payment tracking integrations.
- **Tech Platforms** – Enabling fast deployment of finance modules into web and mobile apps through SDKs and sandbox APIs.

The company fosters a fast-paced, collaborative, and mentorship-driven environment where interns and professionals alike get hands-on experience with real-world products. Interns at AuthLayer are involved in critical functions—from product R&D, UI/UX enhancements, and onboarding strategy development to debugging, client interaction, and documentation.

With its strong focus on innovation, product ownership, and lean development cycles, **AuthLayer provides interns the opportunity to work alongside engineers, designers, and founders**, contributing to live deployments and getting exposure to startup operations from the inside out. The culture promotes agility, experimentation, and continuous learning, making it an ideal space for aspiring developers, product managers, and fintech enthusiasts to grow and thrive.

CHAPTER 3 SCOPE OF WORK

During my internship at **AuthLayer**, I was entrusted with a diverse range of responsibilities across product development, UI/UX design, client strategy, and backend automation. The internship offered a 360° view of how SaaS-based fintech platforms are developed, validated, and scaled in a real-world startup environment. The scope covered ideation, requirement gathering, interface design, pricing, onboarding workflows, and automation of internal tools. My key contributions were distributed across the following modules:

1. Product Research & Competitive Analysis

Objective: To identify market gaps and user-centric opportunities by analyzing competing SaaS products and financial platforms.

Scope: This module aimed at improving AuthLayer's core offerings by identifying missing features, validating pricing models, and assessing user experience trends across competitors in the open-banking and financial automation space.

Methodology: Using a structured framework, I evaluated leading SaaS products on features, pricing tiers, integration support, and UX design. Tools like Google Sheets, Coda, and Notion were used to build competitive matrices. I also conducted qualitative analysis through customer testimonials, industry case studies, and direct client feedback.

Results: The insights gathered led to three actionable recommendations for UI simplification and two new pricing model suggestions—both of which were considered during product planning meetings. These findings directly contributed to AuthLayer's onboarding optimization roadmap.

2. UI/UX Design and Onboarding Optimization

Objective: To revamp key sections of the dashboard and onboarding flow for improved usability and reduced customer drop-off rates.

Scope: This project involved identifying friction points in the user journey and redesigning wireframes to improve clarity, navigation, and task completion speed.

Methodology: Using tools like **Figma** and **Balsamiq**, I designed wireframes for user onboarding, dashboard cards, and settings pages. I collaborated with front-end developers and

shadowed client onboarding calls to understand behavioral pain points. A/B testing was later proposed for alternate UI flows.

Results: The redesigned onboarding sequence led to a 25% reduction in drop-off during the setup phase (as per internal tracking tools). Usability scores from client surveys also reflected improved satisfaction in terms of layout and clarity.

3. Automation of Internal Operations (Pricing & Client Communication)

Objective: To build lightweight automation scripts to streamline repetitive internal processes like lead data formatting, pricing tier validation, and customer reporting.

Scope: The goal was to reduce the manual effort spent by business and support teams on tasks like proposal formatting, plan validation, and account access provisioning.

Methodology: Using **Python**, I wrote scripts to automate Excel/PDF generation of pricing sheets, validate JSON configurations of client plans, and populate onboarding checklists dynamically. I also implemented scripts that integrated with email APIs to auto-send formatted reports to team leads.

Results: The automation tools cut down recurring internal tasks by over 40%, significantly improving productivity within the client success and strategy teams.

4. Documentation & Cross-Team Collaboration

Objective: To improve communication between product, design, and sales teams through standardized internal documentation.

Scope: This involved creating and maintaining documents for feature request logs, release notes, onboarding flows, and product FAQs for internal and client-facing use.

Methodology: I created internal wikis using **Notion** and **Confluence**, updated product sheets, and documented workflows for UI/UX changes and feedback loops. These were kept in sync with GitHub issues and Jira tickets.

Results: Documentation adoption helped reduce confusion during cross-team standups and served as a central knowledge base for new team members and clients. It also cut onboarding time for new hires by providing clear product orientation.

CHAPTER 4

LEARNING OBJECTIVES

1. **Enhance Product Thinking and Business Awareness**

One of the core learning goals was to develop a strong understanding of how digital products evolve based on user needs, business models, and market dynamics. Through research, feature analysis, and pricing experiments, I learned to align technical efforts with strategic business goals—an essential skill in SaaS product development.

2. **Improve UI/UX Sensibility and Design Collaboration**

Working on the UI/UX redesign process helped me gain practical knowledge of how design decisions impact user engagement. I enhanced my skills in wireframing, visual hierarchy, and user onboarding flows using tools like Figma, while learning how to incorporate client feedback into iterative design processes.

3. **Master Real-World Application of Python for Automation**

Python played a critical role in automating internal tools such as pricing validators, onboarding templates, and client communication scripts. This experience strengthened my understanding of file handling, data structuring, and API integration within business operations, emphasizing the role of automation in startup efficiency.

4. **Develop Cross-Functional Collaboration and Communication Skills**

Collaborating with product managers, engineers, and the client success team required clear documentation and communication. I learned to contribute effectively to meetings, maintain structured documentation in Notion and Confluence, and sync progress with tools like Jira and GitHub—skills that are key in any agile work environment.

5. **Understand SaaS Metrics, Customer Behavior, and Market Fit**

By engaging in competitor analysis, pricing research, and feature benchmarking, I developed a deeper understanding of how SaaS platforms operate. I learned to interpret metrics such as churn rate, activation rate, and feature adoption, gaining insights into what drives customer retention and product-market fit.

CHAPTER 5

CHALLENGES AND SOLUTION

1. Product Strategy and Pricing Validation

Challenges:

One of the early hurdles during my internship was conducting accurate pricing validation and market comparison in a fast-changing SaaS landscape. The challenge wasn't just comparing prices, but aligning them with feature sets, client personas, and usage tiers. AuthLayer's product suite had modular capabilities, making direct price mapping with competitors complex. Additionally, many competitor platforms lacked transparent pricing models, limiting data availability. Another challenge was communicating technical pricing logic to non-technical stakeholders such as clients and business teams.

Solution:

I tackled this by designing a dynamic benchmarking sheet using Google Sheets and Python scripts to scrape and organize pricing data from various platforms (where available). I mapped features against pricing tiers using a multi-weighted scoring system. I also worked with the sales and tech teams to understand AuthLayer's internal cost logic, enabling me to develop a flexible pricing model tailored to customer profiles. Finally, I compiled the data into a well-structured document and presented it with graphs and UI mockups to help stakeholders visualize the pricing logic clearly.

2. UI/UX Feedback Loop and Onboarding Optimization

1. **Challenges:**

Revamping the onboarding process required both UX intuition and a deep understanding of user behavior. One major challenge was identifying friction points across the user journey without direct access to all user sessions. Some of the onboarding steps had high drop-off rates, but the reasons weren't always evident from analytics data alone. Furthermore, implementing changes required alignment with both engineering timelines and design systems.

Solution:

To overcome this, I collected qualitative feedback from users and support teams and mapped it against funnel metrics like time-on-page and feature-activation lag. I used Figma to draft wireframes for simplified onboarding paths and added visual tooltips and modals for better guidance. Collaborating with frontend developers, I prioritized a low-effort, high-impact onboarding prototype for A/B testing. These efforts contributed to a measurable reduction in user drop-offs and improved time-to-first-activation.

3. Internal Tooling and Automation for Pricing Docs

Challenges:

Creating dynamic, client-specific pricing sheets and proposal templates was time-intensive for the operations team. Each request needed formatting, calculation of tiered usage, and documentation alignment. Managing these through manual edits made the process slow, error-prone, and difficult to scale.

Solution:

To streamline the process, I built a Python-based tool that pulled data from configuration files and auto-generated proposal PDFs using **FPDF** and **Jinja2** for templated content. The solution included modules for rendering custom logos, visual components, and usage-based calculations. It was also equipped with fallbacks and validations to prevent missing fields. The end result was a reusable script that reduced the turnaround time for generating proposals by over 60%.

4. Cross-Team Communication & Documentation Alignment

Challenges:

One persistent challenge in a startup setting is maintaining alignment across rapidly moving teams. With product, sales, and design teams working in parallel, key changes often risked being miscommunicated or undocumented, which led to inconsistencies during product handovers or client briefings.

Solution:

To address this, I created a structured Notion workspace that categorized updates by team, feature, and release. I also implemented a documentation protocol in Confluence for capturing product specifications, design feedback, and FAQs. This helped streamline onboarding for new team members and reduced repetitive queries during sprint meetings. It also served as a “single source of truth” for cross-functional clarity.

HARDWARE AND SOFTWARE REQUIREMENTS

Software requirements:

- **Operating System:** Windows 10 / Windows 11 (64-bit)
- **Python:** Version 3.12.0
- **IDE:** PyCharm Community Edition 2024.1
- **Jupyter Notebook** – for quick prototyping and data exploration
- **Figma** – for UI/UX wireframing and design reviews
- **Notion / Confluence** – for documentation and internal knowledge sharing
- **Requests Library** – for REST API integration
- **Pandas (2.2.0)** – for data manipulation and structuring
- **Matplotlib / Seaborn** – for visualization of pricing, onboarding flow stats, and analytics
- **FPDF / ReportLab** – for PDF generation of automated pricing and client proposal reports
- **Git & GitHub** – for version control and collaborative development
- **Slack / Google Meet** – for team communication and standups

Hardware Requirements:

- **Processor:** Intel Core i7 (or equivalent AMD Ryzen)
- **RAM:** Minimum 8 GB (16 GB recommended for multitasking and design tools)
- **Storage:** SSD with at least 256 GB free space
- **Display:** 23-inch LED Monitor (Full HD or higher)
- **Peripherals:** Standard Mouse and Keyboard
- **Internet:** High-speed Fiber Optic Connection
- **Connectivity:** LAN/Ethernet Port or stable Wi-Fi module

CHAPTER 6

ACHIEVEMENTS AND CONTRIBUTION

1. Pricing Model Analysis and Strategy Design

One of my first major contributions at AuthLayer was conducting a comprehensive pricing model analysis for the company's modular SaaS offerings. I analyzed industry competitors, mapped feature-to-pricing tiers, and collaborated with the product and business teams to propose flexible pricing plans tailored to different customer personas.

Using spreadsheet tools and data visualization libraries like **Seaborn** and **Plotly**, I presented comparisons that highlighted gaps and opportunities in the existing strategy. These insights were used in planning discussions for future pricing rollouts.

Impact: Helped improve pricing clarity and customer segmentation, leading to better alignment of product value with customer expectations.

2. UI/UX Redesign and Onboarding Flow Optimization

A core area I contributed to was simplifying the user onboarding journey and enhancing overall usability across the dashboard. Using **Figma**, I redesigned screens for key onboarding steps, settings pages, and interactive tooltips.

I also shadowed support calls to identify common pain points, then translated them into visual and functional UI improvements. Wireframes were tested with internal users and refined based on feedback.

Impact: Reduced onboarding drop-off by approximately 25% and improved time-to-first-activation metrics, as reported in internal analytics.

3. Automation of Client Proposal and Report Generation

One of the most impactful projects I worked on involved automating the creation of pricing proposals and onboarding documents, which were previously handled manually.

Using **Python**, I built a modular script using **FPDF** and **Pandas** to generate branded, structured PDF proposals from internal data templates. These reports included usage breakdowns, customized pricing, and visual highlights. I also embedded company logos and visual assets to maintain a professional look.

Impact: Reduced proposal preparation time by over 60%, increased formatting consistency, and minimized human errors in client documents.

4. Product Documentation and Internal Knowledge Base

To address communication gaps across product, design, and operations teams, I helped build a structured internal documentation system on **Notion**. I created content for feature explanations, release notes, onboarding guides, and common troubleshooting workflows.

This resource was made accessible to new hires, interns, and cross-functional teams, ensuring that everyone could stay aligned without repeated clarification or loss of context.

Impact: Improved transparency across teams and cut onboarding time for new team members by standardizing product knowledge.

5. Client Feedback Integration and Feature Prioritization

I participated in client feedback sessions, recorded pain points, and worked closely with the product team to log and categorize these into feature request documents. These were mapped against development effort and business value to aid prioritization.

I also created visual charts for internal presentations that helped leadership decide which client needs aligned best with long-term roadmap goals.

Impact: Enhanced responsiveness to client feedback and enabled more data-driven feature planning.

6. Competitive SaaS Feature Benchmarking

I conducted a detailed benchmarking exercise comparing AuthLayer’s feature set with those of 10+ other SaaS platforms in the fintech space. This involved researching open APIs, user onboarding flows, and compliance automation tools across competitors.

The findings were shared in a presentation with the CEO and product leads, accompanied by actionable recommendations for improving differentiation and customer retention.

Impact: Directly influenced upcoming feature enhancements and product positioning in a competitive landscape.

Hi, Need any help?

CHAPTER 7

REFLECTION AND ANALYSIS

Reflecting on my internship experience at **AuthLayer**, I can confidently say it was one of the most insightful and professionally enriching phases of my academic and career journey. This internship gave me the opportunity to step out of a classroom setting and immerse myself in the dynamic, fast-paced environment of a growing SaaS fintech startup.

One of the most impactful takeaways was understanding how product decisions are made based on both user behavior and business goals. Working on real-time projects such as pricing model analysis, UI/UX improvements, and internal automation tools helped me develop a keen eye for product detail, feature prioritization, and customer-centric design. I learned how to approach problems not just as a developer, but as a strategist focused on delivering functional, scalable, and user-friendly solutions.

The internship challenged me to think critically and take ownership of my work. Many tasks required working with limited resources or incomplete documentation, especially when reverse-engineering onboarding flows or standardizing proposal templates. This experience taught me the importance of independent research, internal collaboration, and iterative development—all of which are crucial in real-world tech environments where ambiguity is common.

A key area of growth for me was automation using Python in a business context. From generating dynamic PDFs and structuring pricing sheets to building scripts for internal ops support, I experienced firsthand how automation can reduce workload, improve accuracy, and bring structure to startup chaos. This gave me confidence in writing production-ready code that directly supports business operations.

In addition to technical skills, I honed my abilities in communication, documentation, and project collaboration. Regular syncs with cross-functional teams helped me understand how to align tech outputs with business needs. Creating Notion pages, API notes, and design briefs taught me how to present my work clearly and contribute meaningfully in team environments. Overall, this internship at AuthLayer was a well-rounded experience that combined technical execution with strategic thinking. It gave me a deep appreciation for product management, an understanding of fintech workflows, and real confidence to contribute in high-impact roles. I now feel more prepared—both technically and professionally—to take on future opportunities in SaaS, product strategy, and fintech innovation.

CHAPTER 8

RECOMMENDATIONS

- **Introduce Structured Product Walkthroughs & Onboarding Sessions**

Starting the internship with detailed walkthroughs of AuthLayer's product suite (e.g., APIs, dashboards, client journeys) would give interns deeper context into how the platform works. Clear documentation on workflows, business logic, and stakeholder expectations will help them contribute meaningfully from the outset.

- **Promote Consistent Use of Project Management Tools**

Interns should be guided to actively use tools like Jira, GitHub, or Notion from day one for task tracking and collaboration. Integrating them into the sprint cycle not only improves accountability but also provides real-world exposure to agile practices followed in tech startups.

- **Provide Access to a Fintech Learning Resource Hub**

A curated repository of internal product docs, API guides, sandbox demos, fintech case studies, and UI/UX principles would significantly flatten the learning curve. Including past projects and annotated code snippets would empower interns to self-learn and problem-solve efficiently.

- **Encourage Ownership of Micro-Projects**

Assigning small but complete ownership of real features—like automating a report, designing a pricing template, or creating onboarding screens—can help interns build confidence and see direct impact from their work. Milestone-based tracking and demo days would further boost engagement.

- **Conduct Weekly Syncs and Feedback Sessions**

Regular 1:1 or group sessions with mentors and team leads can create a safe space for questions, feedback, and iterative improvement. These sessions can also be used to share key product updates, brainstorm ideas, or align expectations on ongoing tasks.

- **Foster Cross-Functional Exposure and Peer Interaction**

Providing opportunities for interns to attend design critiques, product roadmap calls, or client debriefs can broaden their perspective. Additionally, pairing them with peers for short design or automation sprints will enhance collaboration skills and simulate real-world team dynamics.

CHAPTER 9

CONCLUSION

The internship at **AuthLayer** was a highly enriching and career-defining experience that allowed me to apply my academic and technical skills in a real-world fintech startup environment. Throughout the course of the internship, I engaged in a wide array of impactful projects that strengthened my abilities in product strategy, UI/UX design, pricing analysis, automation using Python, and client onboarding optimization.

Each task I undertook exposed me to practical business challenges and helped me understand how technology and user experience intersect to create scalable SaaS products. I contributed to core business functions—from designing onboarding flows and building automation tools to supporting pricing decisions with competitive market insights. This hands-on involvement has significantly enhanced both my technical proficiency and strategic thinking.

What made the experience particularly valuable was the supportive and fast-paced work culture at AuthLayer. I had the autonomy to experiment and propose solutions, while also benefiting from direct mentorship and collaborative feedback from cross-functional teams. This environment fostered both independence and teamwork, giving me a holistic view of startup operations and product development cycles.

In conclusion, my internship at AuthLayer has been instrumental in preparing me for future roles in product management, fintech, and technology strategy. It offered me the right blend of skill-building, real-world exposure, and professional growth. I am grateful for the opportunity to learn, contribute, and grow with the team, and I leave the internship more confident, capable, and motivated to take on greater challenges in the tech industry.
